FULLSTACK QAP3

Questionnaire:

1. This assignment took me roughly fourteen and a half hours to complete.
2. For this assessment I used your source code, codium and chat gpt
3. No
4. No
5. I found this QAP incredibly challenging. I have a solid understanding of how the layers interact but had a lot of difficulty with getting them to cooperate. I also started too much too big. I tried to make both the artist page and the albums page have all of the features (put, patch, add and delete). While the add took me a while to figure out, I feel like I've learned a lot in figuring out how to get it to work. However the Delete function wasn't working for the longest time, and all of a sudden it was. I was not able to follow the logic in what got it working, but it did so that's something.
I was trying to get a patch function working along with the put, but I was receiving the same kind of error, and understand that they are both part of the Update, so saved myself the stress and just stuck with the Put method to update.
